

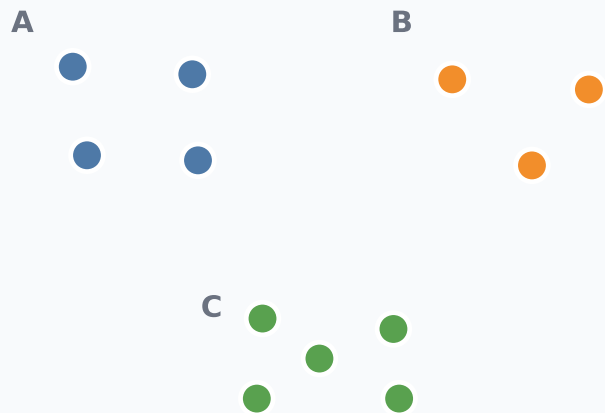

Graph view

Components = individuals

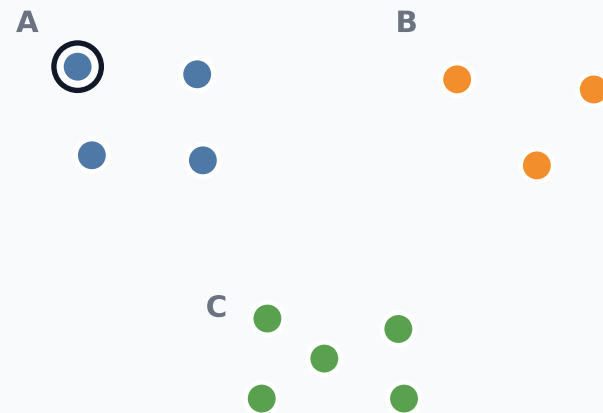

(a) Images grouped by individual

Sampling (outer)

Pick $u \sim Q(u)$ (uniform)

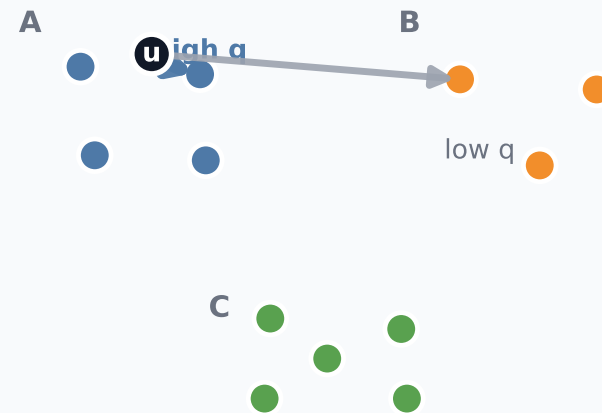

Here: $Q(u) = 1/|V|$

(b) Pick one anchor image

Sampling (inner)

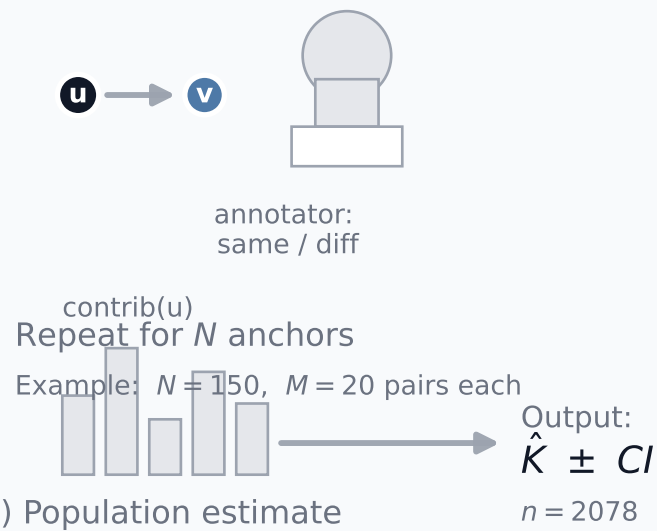

Pick $v \sim q(v | u)$ from Re-ID similarity

(c) Query a few likely neighbors

Annotate + estimate

Repeat and average contributions

(d) Population estimate
